## POST PRESS THAT FITS !

As a reliable and stable partner we meet all our customers' needs!

**We offer:**

- More than 30 years of experience planning & implementing efficient post press systems
- Customized and reliable solutions – from single stackers to complete automation
- Innovative technology to increase productivity in newspaper, book and commercial printing
- The trust of thousands of satisfied global customers and an international dealer network for local support

**RIMA**  **SYSTEM**

## Consulting

Our skilled and experienced employees will help to identify individual needs and production requirements. To plan and design customized, efficient solutions is our daily business. We give customer satisfaction the top priority.

## Conveying

Whether floor or overhead conveying systems, standard solutions or heavy-duty applications – with our conveying systems the shingled stream will always find the right way. Innovative spiral and special purpose conveyors allow the fast and safe transport of signatures even when working with confined spaces.

## Trimming

Our rotary trimmers are precise and reliable. High trimming quality, robust and compact design as well as fast knife change are only a few of the many advantages which underline the strength of our range.

## Lift Stacking

More than 9000 installed stackers demonstrate the outstanding quality of our machines. Whether 4-pages products in A4 format, tabloid papers or 128-pages rotogravure products, the shingled stream is always turned into perfect and stable stacks. Optional blocking units can help to further increase the stability of the stacks.

## Log Stacking

RIMA-SYSTEM log stackers enable the easy transfer of print products between press room and bindery. The strapped logs can be transported quickly and without trouble and can also be used as a space-saving intermediate storage solution.

## Palletizing

Our high-speed palletizers handle the time and cost-intensive manual palletizing of stacks and logs. Optional components like automatic slip sheet feeders or pallet dispensers further increase the level of automation, making palletizing a fully automated process with maximum pallet quality and efficiency.

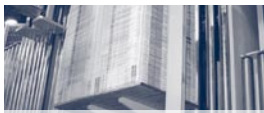

## PPMS-Software

The digitalization of production processes enables the fast and cost-efficient monitoring and controlling of the complete production. Our software solutions ensure the recording of all relevant data as well as the information exchange between the machines and significantly ease the operation.

## Service & Support

RIMA-SYSTEM's service & support is always available - either for solving problems, providing advice or for spare parts support. Our dedicated staff are on hand and trained to provide swift answers to any queries the customer may have.

**NEW** - CIVIEMME-SYSTEM as well as the RIMA-SYSTEM project centers exclusively supply the vertical log stackers of the former CIVIEMME SpA. Comprehensive service & support for all previously installed CIVIEMME components is now ensured by CIVIEMME-SYSTEM.
